

Đồng Quang Quý

Fullstack web developer

SUMMARY

Software Engineer and UIT Graduate with 3 years of experience at Emotive Software. I specialize in developing complex, high-performance web systems by bridging the gap between sophisticated ReactJS interfaces and robust Node.js backends. I am dedicated to engineering clean, scalable code and optimizing system performance to deliver high-quality, end-to-end solutions

CONTACT

WORK EXPERIENCE

Company: Emotive Software (Now: Evina Software) | Dec 2022 - Dec 2025 | Fullstack web developer

Project: OTF4Web | Cloud-based Automotive Design Editor | 3 - 6 members

- **Project URL:** www.emotive.de/en/open-test-framework
- **Description:** A mission-critical web-based platform migrated from a legacy desktop system, enabling automotive engineers to design and execute complex testing workflows on the cloud.
- **Technologies:** ReactJS, MUI, Node.js (Express), RESTful api, PostgreSQL, AWS CDK, Docker, Vitest & react-testing-library, Playwright, Git, Jenkins.
- **Responsibilities:**
 - **Frontend Architecture:** Architected and developed core IDE-like modules (Ribbon Bar, Solution Explorer, Context menu) using ReactJS and MUI, ensuring a modular and scalable UI structure.
 - **High-Interaction UI:** Leveraged ReactJS and specialized libraries to implement complex features like a Drag-and-Drop toolbox and Activity Nodes to match desktop-level functionality.
 - **Performance Optimization:** Offloaded heavy data processing to Web Workers and implemented Virtualization/Lazy Loading to handle massive automotive datasets without blocking the UI main thread.
 - **Backend & API:** Designed and built robust RESTful APIs using Node.js (Express) to serve as a high-performance bridge between the UI and the database.
 - **Database:** Directly managed complex business logic by writing optimized Stored Procedures and Functions in PostgreSQL (Raw SQL) to ensure data integrity and speed.
 - **Testing:** Set up a comprehensive testing strategy using Vitest and React Testing Library for unit tests, and Playwright for end-to-end (E2E) automation.
 - **DevOps IaC:** Directly maintained and updated cloud resources using AWS CDK scripts, ensuring system stability and streamlined deployment.

PERSONAL PROJECT

Mai Vinh Store (E-Commerce Catalog & Price Lookup PWA)

- **Url:**
 - **Github:**
 - **Technologies:** Next.js 15, TypeScript, MongoDB, Upstash Redis, TanStack Query, Redux Toolkit.
 - **Key Achievements:**
 - **Performance Optimization:** Significantly improved data response times via Redis micro-caching and minimized initial bundle size using Next.js dynamic imports.
 - **Hybrid Architecture:** Combined SSG for layouts and CSR for data fetching to ensure instant Time-To-Interactive (TTI), alongside granular cache eviction to prevent stale data.
 - **Security & Auth:** Implemented Role-Based Access Control (RBAC) and passwordless Google One-Tap login via NextAuth.js.
-

SKILLS

- **Programming Languages:**
 - Js, Ts, Sql.
 - **Frameworks & Libraries:**
 - ReactJS, Next.js, Node.js, Tailwind, MUI.
 - **State Management & Data Fetching:**
 - Redux Toolkit, React Context, TanStack Query.
 - **Databases:**
 - PostgreSQL, MongoDB.
 - **Testing:**
 - Vitest, React Testing Library, Playwright (E2E).
 - **Tools & Infrastructure:**
 - Git, AWS CDK, Docker.
 - **Management & Productivity:**
 - Redmine, AI-assisted coding (Cursor, AntiGravity).
 - **Core Competencies:**
 - Web Performance Optimization (SSR, SSG, Web Workers), SOLID, Clean Code, DRY, Design Patterns.
 - **English:** Intermediate
