📍 Buon Ma Thuot, Dak Lak – Vietnam

📅 17+ years in IT / QA Engineering

🔧 QA | SQL | API | Automation

PROFESSIONAL SUMMARY

IT Engineer with 17+ years of experience in the technology industry, with comprehensive knowledge of the full Software Development Life Cycle (SDLC) — from requirements analysis, test scenario design, and coding, to system testing and Go-live operational support.

Outstanding strengths in Database Testing (Oracle SQL/PL/SQL), API Testing, and Root Cause Analysis. A solid programming foundation in Python, C#, and Java enables effective execution of both Manual Testing and Automation Testing (Selenium, Playwright). Uses AI tools to accelerate requirement analysis, test case design, test data generation, automation scripting, code review and failure analysis.

CORE SKILLS

- **AI-Augmented QA:** ChatGPT, Claude, Gemini, DeepSeek; AI-assisted requirement analysis, test case generation, test data generation, automation code generation, code review and failure analysis
- **Software Testing:** Test Planning, Test Case & Scenario Design, Functional, Regression, Integration, Smoke, System, UAT, Exploratory, Web Application Testing
- **Automation Testing:** Python, Playwright, Selenium WebDriver, test script creation/maintenance, regression automation, Page Object Model concepts
- **API & Database Testing:** REST API, Postman, JSON/XML validation, API assertions, Oracle SQL/PLSQL, Stored Procedures, Functions, Views, data integrity validation
- **Test Management:** Jira, Trello, defect lifecycle, sprint tracking, QA reporting, Root Cause Analysis (RCA)
- **Version Control / Delivery:** Git, SVN, CI/CD concepts; GitHub Actions

WORK EXPERIENCE

Senior QA Engineer / Software Quality Assurance | 2007 – Present (17+ years in IT)

ERP · Healthcare · Education Software Projects (Multiple Organizations)

- Participated in all SDLC phases: requirements gathering → business analysis → test design → execution → reporting → go-live support.
- Designed Test Plans, Test Cases, Test Scenarios, and prepared Test Data for large-scale web systems.

- Executed Functional, Regression, Integration, Smoke, and UAT testing across multiple release cycles.
- Performed in-depth Database Testing using Oracle SQL/PL/SQL: data validation, Stored Procedures, Functions, Views, and Reports.
- Tested REST APIs and validated JSON/XML responses using Postman.
- Built Python scripts to automate repetitive testing tasks, significantly reducing regression execution time.
- Applied Selenium WebDriver for web automation testing; actively developing Playwright test scripts.
- Conducted Root Cause Analysis (RCA) for complex defects and collaborated with developers to verify fixes and close bugs.
- Developed and customized JasperReports reports to meet business requirements.
- Supported system deployments (Go-live), post-production operations, and incident resolution.
- Managed bug lifecycle and sprint tracking using Jira/Trello; generated QA metrics and status reports.
- Proactively applied AI tools (Claude, ChatGPT, Gemini, Deepseek, GitHub Copilot) to accelerate test case authoring, spec review, and code analysis.

KEY PROJECTS

◆ Hospital Information System (HIS)

Oracle DB · PL/SQL · REST API · Postman · JasperReports

- Comprehensively tested modules: outpatient, prescriptions, inpatient, billing, and statistical reporting.
- Designed 500+ test cases covering complex health insurance (BHYT) business rules.
- Performed integration testing between HIS and national health insurance system via XML/REST interfaces.
- Conducted Root Cause Analysis for billing calculation errors and BHYT data transmission failures.

◆ School Management System

Oracle DB · Web Application · PL/SQL

- Tested modules: student records, grades, tuition fees, examinations, and reporting.
- Facilitated UAT sessions with teachers and administrative staff to validate business workflows.
- Wrote SQL scripts to verify data integrity after each database migration.

◆ Payroll System – Vung Ro Port & Inventory Management – Saigon Beer

Oracle DB · PL/SQL · Business Logic Testing

- Tested payroll business logic: formulas, shifts, allowances, and personal income tax calculations.
- Verified goods receipt/issue, inventory, and internal financial reports.
- Validated all Stored Procedures and Functions handling core business logic.

KEY STRENGTHS – ALIGNED WITH THE ROLE

- ✓ Ownership – Treat product quality as a personal responsibility; follow through until every issue is closed.
- ✓ Transparency – Proactively report progress, blockers, and risks; no issue is hidden.
- ✓ Advanced SQL – Uncovers data-layer defects that UI testing misses.
- ✓ API Testing – Validates business logic independently of the frontend.
- ✓ AI-Augmented QA – Speeds up test case creation by 40–60% using AI tools.
- ✓ Automation Mindset – Automates regression with Python + Playwright scripts.
- ✓ Agile-Ready – Comfortable with sprint-based delivery, responsive via Trello/Jira.
- ✓ Remote Discipline – Self-driven, personal equipment ready, available 4–8 hrs/day.

NOTABLE ACHIEVEMENTS

- Successfully assured quality for 4 enterprise-scale software systems (Healthcare, Education, Logistics, Manufacturing) prior to go-live.
- Built Python automation scripts that measurably reduced regression test execution time and manual effort.
- Developed and customized 30+ JasperReports reports fully aligned with business requirements.
- Resolved numerous complex data-layer defects through Oracle SQL/PL/SQL analysis.
- Supported identification of production-critical Root Causes, contributing to reduced system downtime.
- Pioneered AI tool adoption into the QA workflow, enhancing team productivity in analysis and review.

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Information Technology

University – Computer Science / IT

Master of Computer Science

Postgraduate – Computer Science / IT

Playwright & Python Automation Testing – *Currently applied to real projects*

Hands-on training course

Continuous self-development in AI-assisted QA, CI/CD, cross-browser testing, performance testing and security testing
